

Making Sense of Fractions with Percentages 2

Only using the numbers 1 and 6 from the fraction $\frac{1}{6}$, use a calculator to help you figure out the decimal to find the percentage for the fraction.

Use the table below to show what you did and the answer you found. After each attempt explain why your answer is the correct percentage.

Number	Operation (Addition, subtraction, multiplication, division)	Number	Answer	Why this is correct or is not correct.

We have learned that fractions mean the following things.

Part whole relationship. part of a group of objects or length.
Division - sharing into equal group sizes.
Measure- identify a length using that as a measurement unit to determine the length. Using this as a way to count.
